Now a while ago i bought a computer :

8600GS - OEM card - 256MB  
Intel Core 2 Duo E6750 OC'ed @ 3.0 Ghz  
350 watt power supply  
2 Gig's DDR2 RAM , dual channel @ 667 Mhz.  
Windows Vista home premium 64- bit  
Mobo : Q35MDO-MSI  
2x 500 GB - 7200 RPM , 8MB HDD

with this system i'm getting 20-25 fps on everything LOW DX10.

will getting a XFX 9800GTX-512MB  
another 2 gig ram DDR2 667MHz  
and OCZ StealthXStream 600watt

Will this HELP please I rly want to play this game.

Yes it should help, but try to play around with game settings as well. Some times the low settings aren't the best, from my experiance.. ;)
